

WHAT IS BLOCKCHAIN TECHNOLOGY?

- ➔ Blockchain is a comprehensive and up-to-date digital ledger system to record transactions and assets.
- ➔ Each record in the blockchain is encrypted and time-stamped, ensuring the utmost security and accuracy of the information.
- ➔ What makes blockchain so useful are its immutability, transparency, decentralization features, and the fact that stored data cannot be altered or deleted.

HOW COULD BLOCKCHAIN MAKE DOCUMENT MANAGEMENT EASIER?

- ➔ Blockchain simplifies document management by providing a secure, transparent, and tamper-proof platform for storing and accessing documents.
- ➔ It eliminates the need for manual paperwork, reduces the risk of data loss or alteration, streamlines document verification processes, and enables efficient tracking and auditing of document history.
